Summary

I've been building software since 2018, focusing on web and mobile development. One of my early projects was an anonymous confessions platform for my college, which shaped how I approach software — building products that solve real problems for real people.

Since then, I've delivered solutions across fintech, startups, agencies, non-profits, and enterprise environments, with a strong focus on secure, scalable systems and clean, maintainable code. I value collaboration, continuous learning, and using modern tools, including AI, to build smarter and ship faster.

Education

Pearson Institute | Midrand

Bachelor of Science (BSc) (Honours) in Computer Science | 01/2024

Pearson Institute | Midrand

Bachelor of Science (BSc) in Computer Science | 12/2015

Skills

SQL, Ruby on Rails, Django, Ruby, Flask, PostgreSQL, AWS, Docker, Git, Github, Git Actions, React.js, Javascript, Python, GraphQL, Jenkins, MongoDB, Amazon S3, Agile, MySQL, Elixir, Phoenix, Google Cloud, REST, TDD, Jira, Trello, Postman, Redis, Sidekiq

Experience

nCino | Johannesburg

Software Engineer | 05/2024 - Present

nCino is a cloud-based fintech platform built on Salesforce that provides digital banking and lending solutions globally. I worked in Security and Infrastructure, contributing to secure, scalable cloud services and AI-assisted engineering tooling.

Roles & Responsibilities:

- Contribute to the development and maintenance of production financial software systems using Ruby and Ruby on Rails in cloud-native environments
- Integrate security tooling including Semgrep (static code analysis) and Orca (cloud security and vulnerability scanning) into development and deployment workflows
- Develop and maintain containerized services using Docker to support consistent development, testing, and deployment workflows
- Work within the Security and Infrastructure team to strengthen platform security posture and enforce secure development best practices
- Build and maintain scalable infrastructure and services deployed on AWS, ensuring high availability, performance, and security compliance
- Collaborate in cross-functional teams using Git-based workflows, peer code reviews, and automated quality gates

Helm Africa | Johannesburg

Software Engineer | 12/2022 - 04/2024

Helm builds AI-driven customer experience and automation platforms used by enterprise clients across banking, telecom, and retail. I worked on backend services, integrations, and AI-driven workflow systems supporting high-volume customer communication platforms

Roles & Responsibilities:

- Built and maintained backend services using Elixir (Phoenix), Python, and Django, supporting AI-driven customer experience and automation platforms
- Collaborated with product, design, AI/ML, and client teams to translate business CX (customer interaction) requirements into scalable technical solutions

- Contributed to development of AI-driven messaging and automation workflows, enabling structured and scalable customer communications across multiple channels (e.g. WhatsApp)
- Designed and implemented RESTful APIs and integration services enabling real-time communication between AI assistants, client systems, and third-party enterprise platforms
- Integrated monitoring, logging, and observability tooling (Grafana, Loki, etc.) to improve system performance visibility and incident response

Open Cities Lab | Johannesburg

Software Engineer | 12/2020 - 11/2022

Open Cities Lab is a civic tech non-profit that builds open data platforms with governments across Africa to improve public services and data-driven decision-making. I worked on backend data services, workflow orchestration, and data pipelines supporting large-scale civic data platforms.

Roles & Responsibilities:

- Contributed to development and integration of data pipelines and workflow orchestration systems using Apache Airflow for large-scale municipal and public datasets
- Designed and implemented REST APIs to expose civic and urban data to public dashboards, research tools, and internal analytics systems
- Supported cloud infrastructure deployments using AWS, including storage and data processing workflows
- Developed backend data services using Python, supporting civic data platforms and urban data processing systems
- Contributed to development and customization of CKAN-based open data platforms used by governments and public sector stakeholders

Ornico Group | Johannesburg

Software Engineer | 10/2019 - 11/2020

Ornicogroup is a brand intelligence and media analytics company that provides advertising, media monitoring, and market intelligence insights across Africa. I worked on backend systems and data pipelines supporting media monitoring, analytics, and reporting platforms.

Roles & Responsibilities:

- Supported development of features within media monitoring and brand intelligence platforms, enabling analysts and clients to access campaign and reputation insights
- Maintained and enhanced legacy Django and Ruby on Rails applications supporting monitoring and reporting systems
- Built and maintained web scraping and automation pipelines using Selenium and Ruby to collect media, advertising, and online content data from multiple sources
- Designed and implemented RESTful APIs to expose media intelligence and analytics data to internal platforms and client-facing tools
- Contributed to internal tooling that helped automate manual media tracking and reporting workflows

VATGlobal | Johannesburg

Junior Software Engineer | 10/2017 - 09/2019

VATGlobal is a global VAT technology company helping businesses manage indirect tax compliance and reclaim processes across multiple countries. I worked on backend systems and data platforms supporting tax automation and high-volume compliance workflows.

Roles & Responsibilities:

- Developed backend services and data processing components using Python, supporting global VAT compliance and tax automation platforms
- Supported development of systems used for multi-jurisdiction VAT compliance, reporting, and tax workflow automation
- Designed and implemented automated test suites and validation frameworks to ensure data accuracy, platform reliability, and regulatory compliance
- Integrated multiple internal and external data sources into centralized systems to streamline tax data processing and reporting workflows
- Supported software testing, validation processes, and release quality controls to meet regulatory and audit standards
